EdgeGard™ System

Installation ease and security in a total metal edging system

Firestone EdgeGard™ System is a unique roof edging system designed for use with all Firestone roofing systems. The EdgeGard™ System combines installation ease with the high-quality features already found in all Firestone systems and components.

The EdgeGard™ System's sturdy design provides excellent resistance to wind forces, affording maximum protection of the roofing system. The fascia system consists of two basic components; a galvanized water dam and a reinforced fascia cover. All components are pre-punched and notched to minimize field labor. Direction labels appear on each panel and a professional installation is accomplished with simple hand tools.

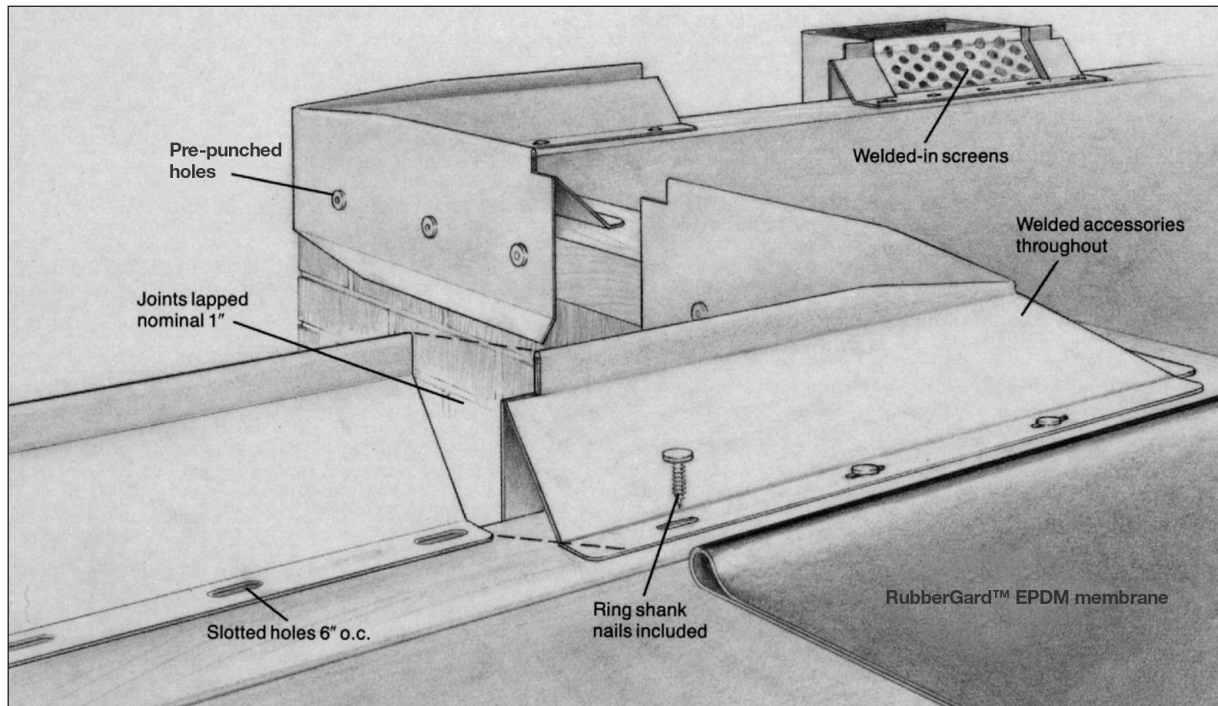

The EdgeGard™ System is priced competitively and offered in face heights of 5½" and 7" for EPDM and TPO systems and 5¾" and 7¼" for modified

bitumen systems. Fascia comes in a standard length of 12'. All fasteners, splice plates and reinforcing clips are included.

And with the EdgeGard™ System, Firestone offers an aesthetic solution with a wide variety of architectural colors and finishes to complement building exteriors.

The Firestone EdgeGard™ System is another component in a complete, compatible, warrantable roofing system that offers single-source economy, simplicity and reliability for every roofing job. One phone call, one order, one solution, one name: Firestone. 1-800-428-4442

Firestone EdgeGard™ System

Technical Specifications:

Fascia Material: Mill finish aluminum and G-90 galvanized steel with Kynar® finish

Gauge: Aluminum: .040"; Steel: 24-gauge

Water Dam: 24-gauge G-90 galvanized steel

Water Dam Miters: Welded watertight aluminum

Downspout Scuppers: Welded watertight aluminum

Spillout Scuppers: Welded watertight aluminum

Reinforcing Clips: .050 aluminum

Fasteners: 1/4" long 11-gauge annular ring shank nails with double hot-dipped zinc coating

NOTE: Downspout and spillout scuppers are pre-assembled with fascia, and include a retainer screen which is welded in place.

System Features:

1. 12-foot long sections
2. Usable with all Firestone Roofing Systems
3. Fasteners, splice plates and reinforcing clips are supplied in each carton.
4. All fastener locations are pre-punched.
5. All corners are radiused (rounded).
6. Water dam miters, as well as downspout and spillout scuppers, are welded watertight aluminum.
7. Downspout and spillout scuppers are pre-assembled.

Sizes:

5½" and 7" fascia height for EPDM and TPO systems and 5¾" and 7¼" for modified bitumen systems; Fascia panels are 12' in length.
